

Secure Cloud Connect

Permanent, fast, secure access to the cloud via a private network

- Direct connection to market-leading cloud platforms
- Secure and trustworthy private networks
- Guaranteed availability and low latency
- End-to-end services including various redundancy options

More and more organizations are working in the cloud. Secure Cloud Connect ensures that you always have secure and immediate access to multiple cloud platforms. This comprehensive end-to-end solution provides direct access to the platforms you prefer, routed through a secure private network.

Total solution boosts efficiency

Secure Cloud Connect provides a comprehensive solution. We connect your organization to your cloud service provider through a private network, keeping the network completely separate from the public internet. Eurofiber provides end-to-end services from your offices and/or datacenter locations to public cloud service providers such as: Microsoft Azure, Microsoft Office 365, Amazon Web Services (AWS) and Google Cloud Platform. Other cloud platforms are available on request. To use Secure Cloud Connect, all you have to do arrange the cloud service with your provider, and we'll take care of the rest.

Tailored to your organization

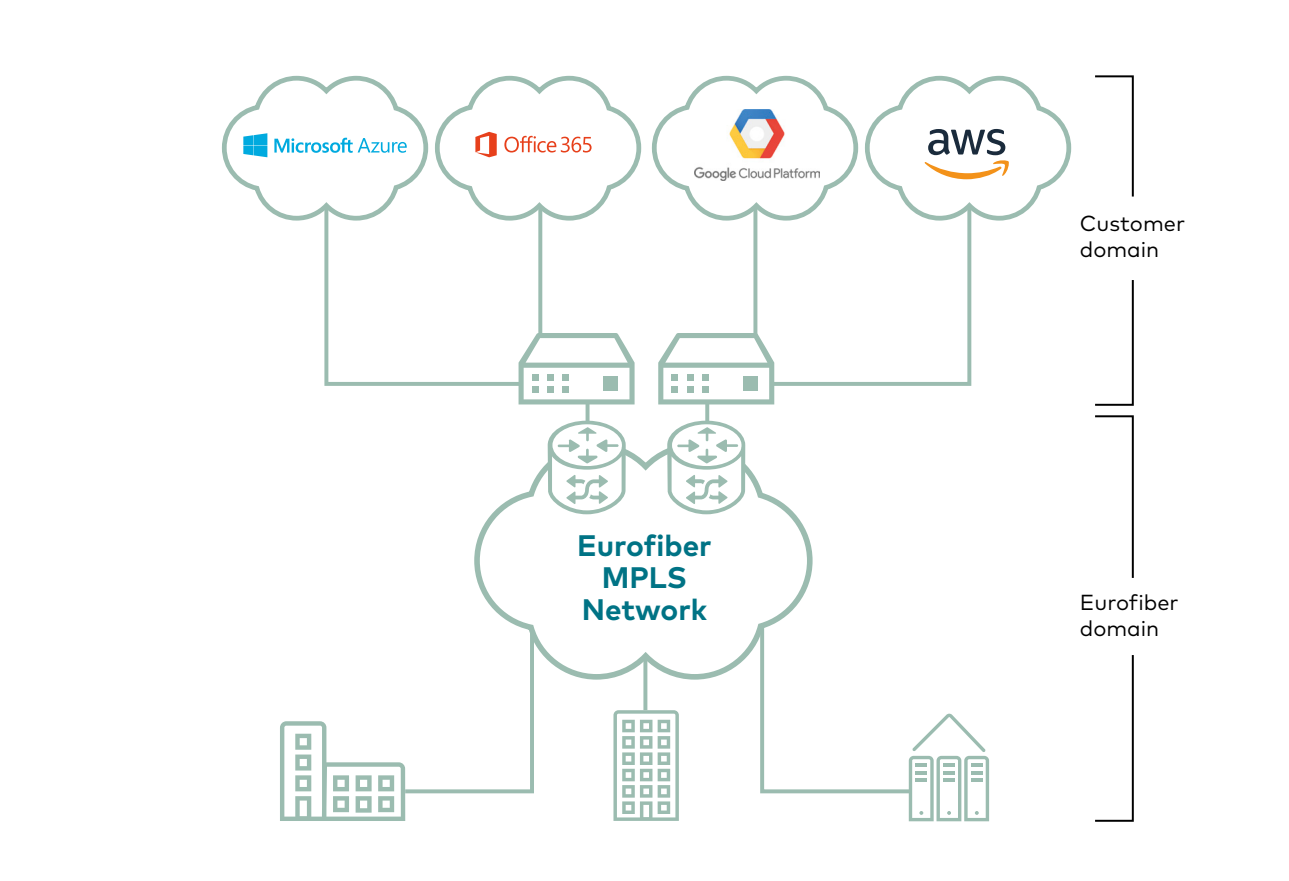

We always offer you a comprehensive solution that provides the optimum response to your organization's situation. We would be happy to help you figure out

the best way to set up your network: Internet, a VPN network to link your headquarters to your branch offices and datacenters, and integration of cloud service providers. The bandwidth, service level, and single or redundant configuration can be defined flexibly for each location within your network. Secure Cloud Connect provides redundancy and supports all bandwidths of the various cloud service providers, ranging from 50 Mb/s up to 10 Gb/s.

Optimum availability and support

To ensure that your organization has reliable access to your cloud providers, we always deliver Secure Cloud Connect in conjunction with Eurofiber's fiberoptic infrastructure, as well as the Eurofiber private layer-2 network. In addition, you can always rely on 24/7 support from the experts at our Network Monitoring Center (NMC).
